LASER ready

THE COMPLETE LASER MARKING SYSTEM

The workstation **LASER ready** has been designed not only to mark small details but also to be installed in any conveyor belt into line productions.

The work area allows the insertion of objects up to A4 size and can be extended under specific customer requests.

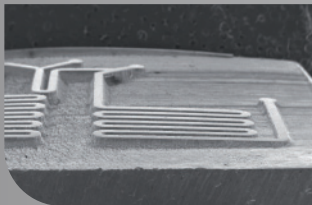

Revolutionary!

LASER ready can be equipped with "AUTOFOCUS".

Insert the object to be marked and press the button. The machine will do the rest.

LASER ready is "READY" to meet the needs of any object to be marked, regardless of the material.

LASER ready is developed after testing and characterizing your marking items.

Thanks to the possibility of removing its lower part, **LASER ready** can be used in two different ways:

- **Stand-alone:** to mark individual parts.
- **On Line:** to mark in series.

The conveyor belt setting gives both the possibility to get continuous marking and to insert the system into a processing cycle in cooperation with other machines.

Stand-alone

On line
